

LANGUAGE LAB

In an attempt to provide its students a platform to improve their language and communication skills, the Apeejay Stya University (ASU) inaugurated a technology-driven language lab with the help of a special software. The course of this new software uses artificial intelligence, wherein students can learn at their own pace. The nine levels of learning ensure that learners start with easier lessons and grow as they move to higher classes.

"My desire is that not only international students but even Indian students develop their language skills as these are essential for success in the working world, given the increasing globalisation," said co-founder and chancellor of Apeejay Stya University, Sushma Paul Berlia. The chancellor said she hoped ASU students also hone their skills in other international languages besides English.

The Language Lab will be run by the School of Journalism and Mass Communication of ASU, which also organised a two-day long workshop related to the new Language Lab. The inauguration, by the vice-chancellor of the University, Dr S K Salwan, was followed by an intense workshop for faculty members.
